Home advantage is **real**

Match result share by venue

Home team

Away team

Win Draw Loss

Win rate · Home vs Away

46% vs **32%**

a 14-point gap

Avg goals · Home vs Away

1.51 vs **1.20**

≈ +0.3 goals per match

Venue doesn't change draws (**22.5%** either way) — it **swaps wins for losses**. The effect holds across all 20 seasons.

Goals are on the rise

Average goals per team per match

Season by season, 2002 → 2022 (axis starts at 1.20)

Average goals by competition

Bundesliga scores most, Ligue 1 least

*'fa-cup' label as tagged in the dataset

Who dominated 20 years?

Top 10 clubs by total points, 2002–2022

Points summed across all competitions in the dataset

Barcelona and **Real Madrid** lead the ranking, with **Bayern Munich** the top Bundesliga side — a list that mirrors each club's era of continental dominance.

KEY TAKEAWAYS

What the data suggests

- 1 Price home fixtures at a premium**
Home sides win 46% vs 32% and score ~0.3 more goals.
- 2 Sell "attacking football" content**
Bundesliga (1.46) and cup ties post the highest goals per match.
- 3 Prioritise Barcelona, Real Madrid & Bayern**
Top cumulative points: the most reliable long-term draws.
- 4 Weight recent seasons in models**
Scoring has climbed since 2016, so 20-year averages understate today.
- 5 Collect real attendance & revenue data**
Match volume was only a proxy; true fan data would sharpen decisions.
